Almanac 1340

139. ENGLISH MEDIEVAL MANUSCRIPT ON VELLUM. Almanac, in Latin with marginal notations in English and Latin; with "Canon magistri Johannis de Linerus. 1340." *Written in red and black on 9 leaves of vellum about 8¾ by 5¾ inches.* 8vo, modern full red morocco, blind tooled. Manuscript interleaved with paper for preservation. 1340

MOST DESIRABLE MANUSCRIPT, AS GENUINE ENGLISH MANUSCRIPTS OF THIS CHARACTER AND PERIOD ARE RARELY FOUND NOWADAYS. Two original vellum fly-leaves (partly torn away) precede the manuscript, on the first of which is written, "*Dr. Manlove's gift to Ralph Thoresby. No. 105. P. 529.*"

Bound in between the two last leaves of the early manuscript is a second manuscript (written on 8 leaves of paper) entitled: "An English Tretise of the Disposicion of the seven Planets," by Timothy Manlove, who presented the work to Thoresby, as the above inscription shows. Dr. Manlove died in 1699.

The volume as it now stands is described by Thoresby in his *History of Leeds*, 1715, pp. 529–30.

Formerly in the Samuel W. Pennypacker collection, with postcard regarding the same, addressed to Governor Pennypacker, laid in.

De .12. signis & eorum naturis in generali

Thou schalt understond that in the firmament above in the .8. spere there is a brode cercle ful of sterres the whiche cercle is departid in .12. and every part is clepid a signe after the signe of the beste that it is likned to. And the .7. planetes maken evermore her cours under the cercle that is clepid the zodiac & whan any planet is gone all the zodiac about. than we seyn that he hath gone all his course. And so Saturne gothe his cours about onse in .30. yere. Jupiter in .12. yere. Mars in .2. yere. the sonne in .on. yere. Venus & Mercury in .oon. yere. the mone in .27. dayes & .28. houris. And for as moche as the firmament is evermore mevyng fro the est in to the west and ayen in to the est in a nyght and a daye. So these these .12. signes evermore bene mevyng fro the est in to the west. and everych of hem ryseth uppe in order after other. And for as moche as eny planet gothe fro sygne to sygne of his owne course that is to sey fro the first to to the second & fro the second to the third &c. Therfor we seyne that the course of the planetes begynneth in the est and goth to reste in the west. but that is not of his owne course but at mevyng forth of the firmament. As be example of a man that throwe softe pase in a schippe and he begynneth at the west ende of the schippe and gothe a soft pas to the est end. and the schippe seyle west and or this man hath gone to the myddis of the schippe. the schippe hath gone fast and born hym forthe west a grete wey. And so it is of the mevyng of the .7. planetes ~~in the .12. signes~~ in order & nombre of the .12. signes as it is schewid in the tablis goyng before. And thou schalt understonde that thes .12. signes folowyn the natur of the .4. elementes for some ben clepid signa ignea. And some signa aerea & some signa aquatica & some signa terrea. And the signis of the fyr bene clepid orientalia signes of the est. And signes of the eyr bene clepid occidentalia signes of the west. In the fyrst party of this tretis I haue declared some of
the disposicions of the .7. planetes & of the .12. signes
therfor now wot I go forthe to the principal entent þt is to sey
to knowe the eleccion of houres. ¶ Elections of houres is as moche
for to sey. as ferr as the course of any constellacon is knowen
in heuene for any tyme for to do or for to begynne any thyng in
erthe that acordith to the same constellacon & þe same meuyng
for aristotel in his secretes secretorum seyth that eche planet go-
uerneth & disposith echa thyng that is lyke to the nature of the
same planet. As begynnyng of werr vndir the duacon of mars
and begynnyng of pees & acorde vndir iupiter / to go to speke with
kynges & princes vndir sol. to go on marchaundis or massages vndir
mercury. to haue to do wt women vndir &c. ¶ And so be this reson
the dismal dayes þt bene sett in the kalender bene of no forse
for all fortune & infortune is after þe cours & meuyng of heuen
and it is euery yere dyuers & than the dismale dayes sett in the kalender
ben euermore varabile. ¶ Also thou schalt vndirstonde & wele knowe
that no sterr nor no planet nor no signe nor no tym in heuen
ben euyl of hem self for godde made all thyng goode and no
thyng for to bene euyl. but for as moche as the werke and
and influens enclyneth & maketh bodies disposid after
seuche thyngis. ¶ As goode stronge wyne is not euyl in his
natur. & yet neuerthelatter it maketh a man dronken yf he
drynke to moche therof. Also fyr is goode in it self & not
withstondyng yf thou fall ther in it woll brenne the.
¶ And so thou mayst wel knowe that fyr & wyne be necessarye
and many suche other thynges after suche charges. ¶ And be this
reson thou mayst wele knowe þt no sterr in the heuen is euyl
of hym self. all thow that bodies benethe folowith the natur
& disposicion of the bodies þt is to seye of the .7. planetes and of
the .12. signes. neuerthelatter vndir what constellacion a man
borne vndir his constellacion puttith no necessite in hyme þt
is to sey þt hym behoueth to be suche as his constellacion meneth
& to wt stonden any impedement ffor any man may wt goode gouernaunce
and wysly settyng his hert and his holy mynde in godde. may destroye
his infortune be it neuer so harde ¶ And also wt recheles gouernaunce
he may lett his goode fortune in the same man ¶ And therfor

De hora Veneris

The houre of Venus is good to seke lordschypis & loue of
wome & greet ladies & for to make news clothis & to do
hem on & for to do any thyng that perteyneth to loue & to de-
lycious thyngis & it is goode for goo frome home but not for to
come home nor thou schalt not come in no schyppe nor let thi blod

De hora Mercurii

The houre of Mercury is goode to write
lettris & charteris & dedis & to send a message & to take a
man goode to go a marchaundis & to borow & to resceue dettis
& to make medycynes & for to beeld or for to take a iorney &
for to werke sotel thyngis & for to sett chyldryn to schole or
to other sotel craftis. But thou schalt not by no erytage nor
londe nor be gynne for to come home nor for to go fro thi contre

De hora lune

The houre of the mone be gynne not
to beeld housis nor schape no clothis nor by no bestis nor be
gynne not for to come home yf thou be frome home. But tha
is goode to go frome home for than thou schalt haue profyt of
thy iorney & than is good to kutte treis & kye frute & to delue
& to make puttis & dychis. And also thes eleccyons of werkis
most be vnderstondid whan any planet is in his dygnyteis

De electionibus horarum secundum coniuncciones planetarum cum luna, primo cum Saturno

Whan the mone is in coniunccion with Saturne sche is infortunat
and lettid and than is not goode to be gynne any thynge
that thou wolt haue a goode end of. And specially to taken any
medcyn for ther schal come no goode therof but harme. And in
this coniunccion comonly the eyr wexith cloudy or chaungith
& specially in contrarie aspecte of Saturne & the mone

De coniunccione lune cum Ioue

Whan the mone is in coniunccion with Iupiter than sche is fortunat
and thane is goode to be gynne any thing that thou wolt haue good of
& speciall whan the mone is in the myddis of heuene or in a goode house

De coniunccione lune cum Marte

Whan the mone is ioyned with Marse
than is sche in the werst plyght & than any goode thyng
that thou schalt do is hyndred. And a iorney be gonne that tyme
is perlous for a man that tyme schal be more greuyd & not mery

De coniunccione solis cum lune

Whan the mone is in chaungynge he is in coniunccion with the sonne and than is happy
or vn happy as sche hath aspecte to other planettis of fortune
or infortune but & sche be with inne .12. degreis be for the chaungyng
or after it is perlous for than sche is in combustione [illegible]

x Whytwel ad inveniendum astrolabie et sic capiendum horas per
alidadam sic facies. Fac tibi tabulam similem de electro astrolabie
convenientem. Et post scita illa tabulam in dorso astrolabii et respice
lineam equinoxialem ubi sol oritur per gradus in dorso astrolabii et ibi
protrahe lineam in tabula ad centrum. Et tunc remove regulam usque
62 gradus et fac ibi aliam lineam et sic habebis cursum graduum usque capit
cancri quod sunt 48.62 gradus. Et tunc pro horis dividendis sic facias. Remove
regulam tot gradus in dorso quot retha astrolabii sunt in hora pro almicantarath
ex altera parte et ibi signa horam quam tibi demonstrat limbus astrolabii
ex alia parte et sic de aliis horis

x J. Whytwel

n coposicoe quadrantis hunc ordinem teneas. Primo describe
lineam occultam protensam ab angulo in angulum iuxta marginem
tabule qua lineam divides in .90. partes equales que appellantur gradus. Deinde
describendi sunt .3. alii circuli equaliter a se invicem distantes
Deinde describendus est circulus meridionalis cum centro suo in linea dextri lateris
et trahatur ex una parte ad terminum circuli qui in tercio gradu ab ipsa linea collaterali
Et ceteri circuli trahantur ex altera parte ad punctum centralem eorundem circulorum. Quo facto
pone filum cum margarita pendentem ex eodem puncto. protrahendi sunt .3. circuli
a sinistro quadrantis et terminabuntur a meridionali. quorum infimus erit longissimus
diei solsticialis estivalis. medius equinoctialis diurnus. solsticialis hyemalis brevissimus 65
Et ut istas lineas recte protrahas. Pone filum perpendiculum super .61. gradus et 12.
xx minuta in quantum poteris estimare. et vide ubi secat lineam meridionalem et fac ibi
punctum. Tunc accipe circinum et protrahe lineam ab illo puncto in sinistri lateris
lineam et resultabit linea largissima solsticialis estivalis occulte circulo cancri qui est
tropicus modus compositionis astrolabii. Deinde pone filum .38. gradus et 29 minuta et
vide ubi secatur linea meridionalis et fac ibi punctum et ab illo puncto protrahe
lineam circularem usque sinistrum latus et resultabit circulus equinoctialis
Postea pone filum super .15. gradus et 21 minutum et vide ubi secatur linea
meridionalis et fac ibi punctum et protrahe lineam circularem ut prius et resultabit
brevissima linea et 3a solsticii yemalis

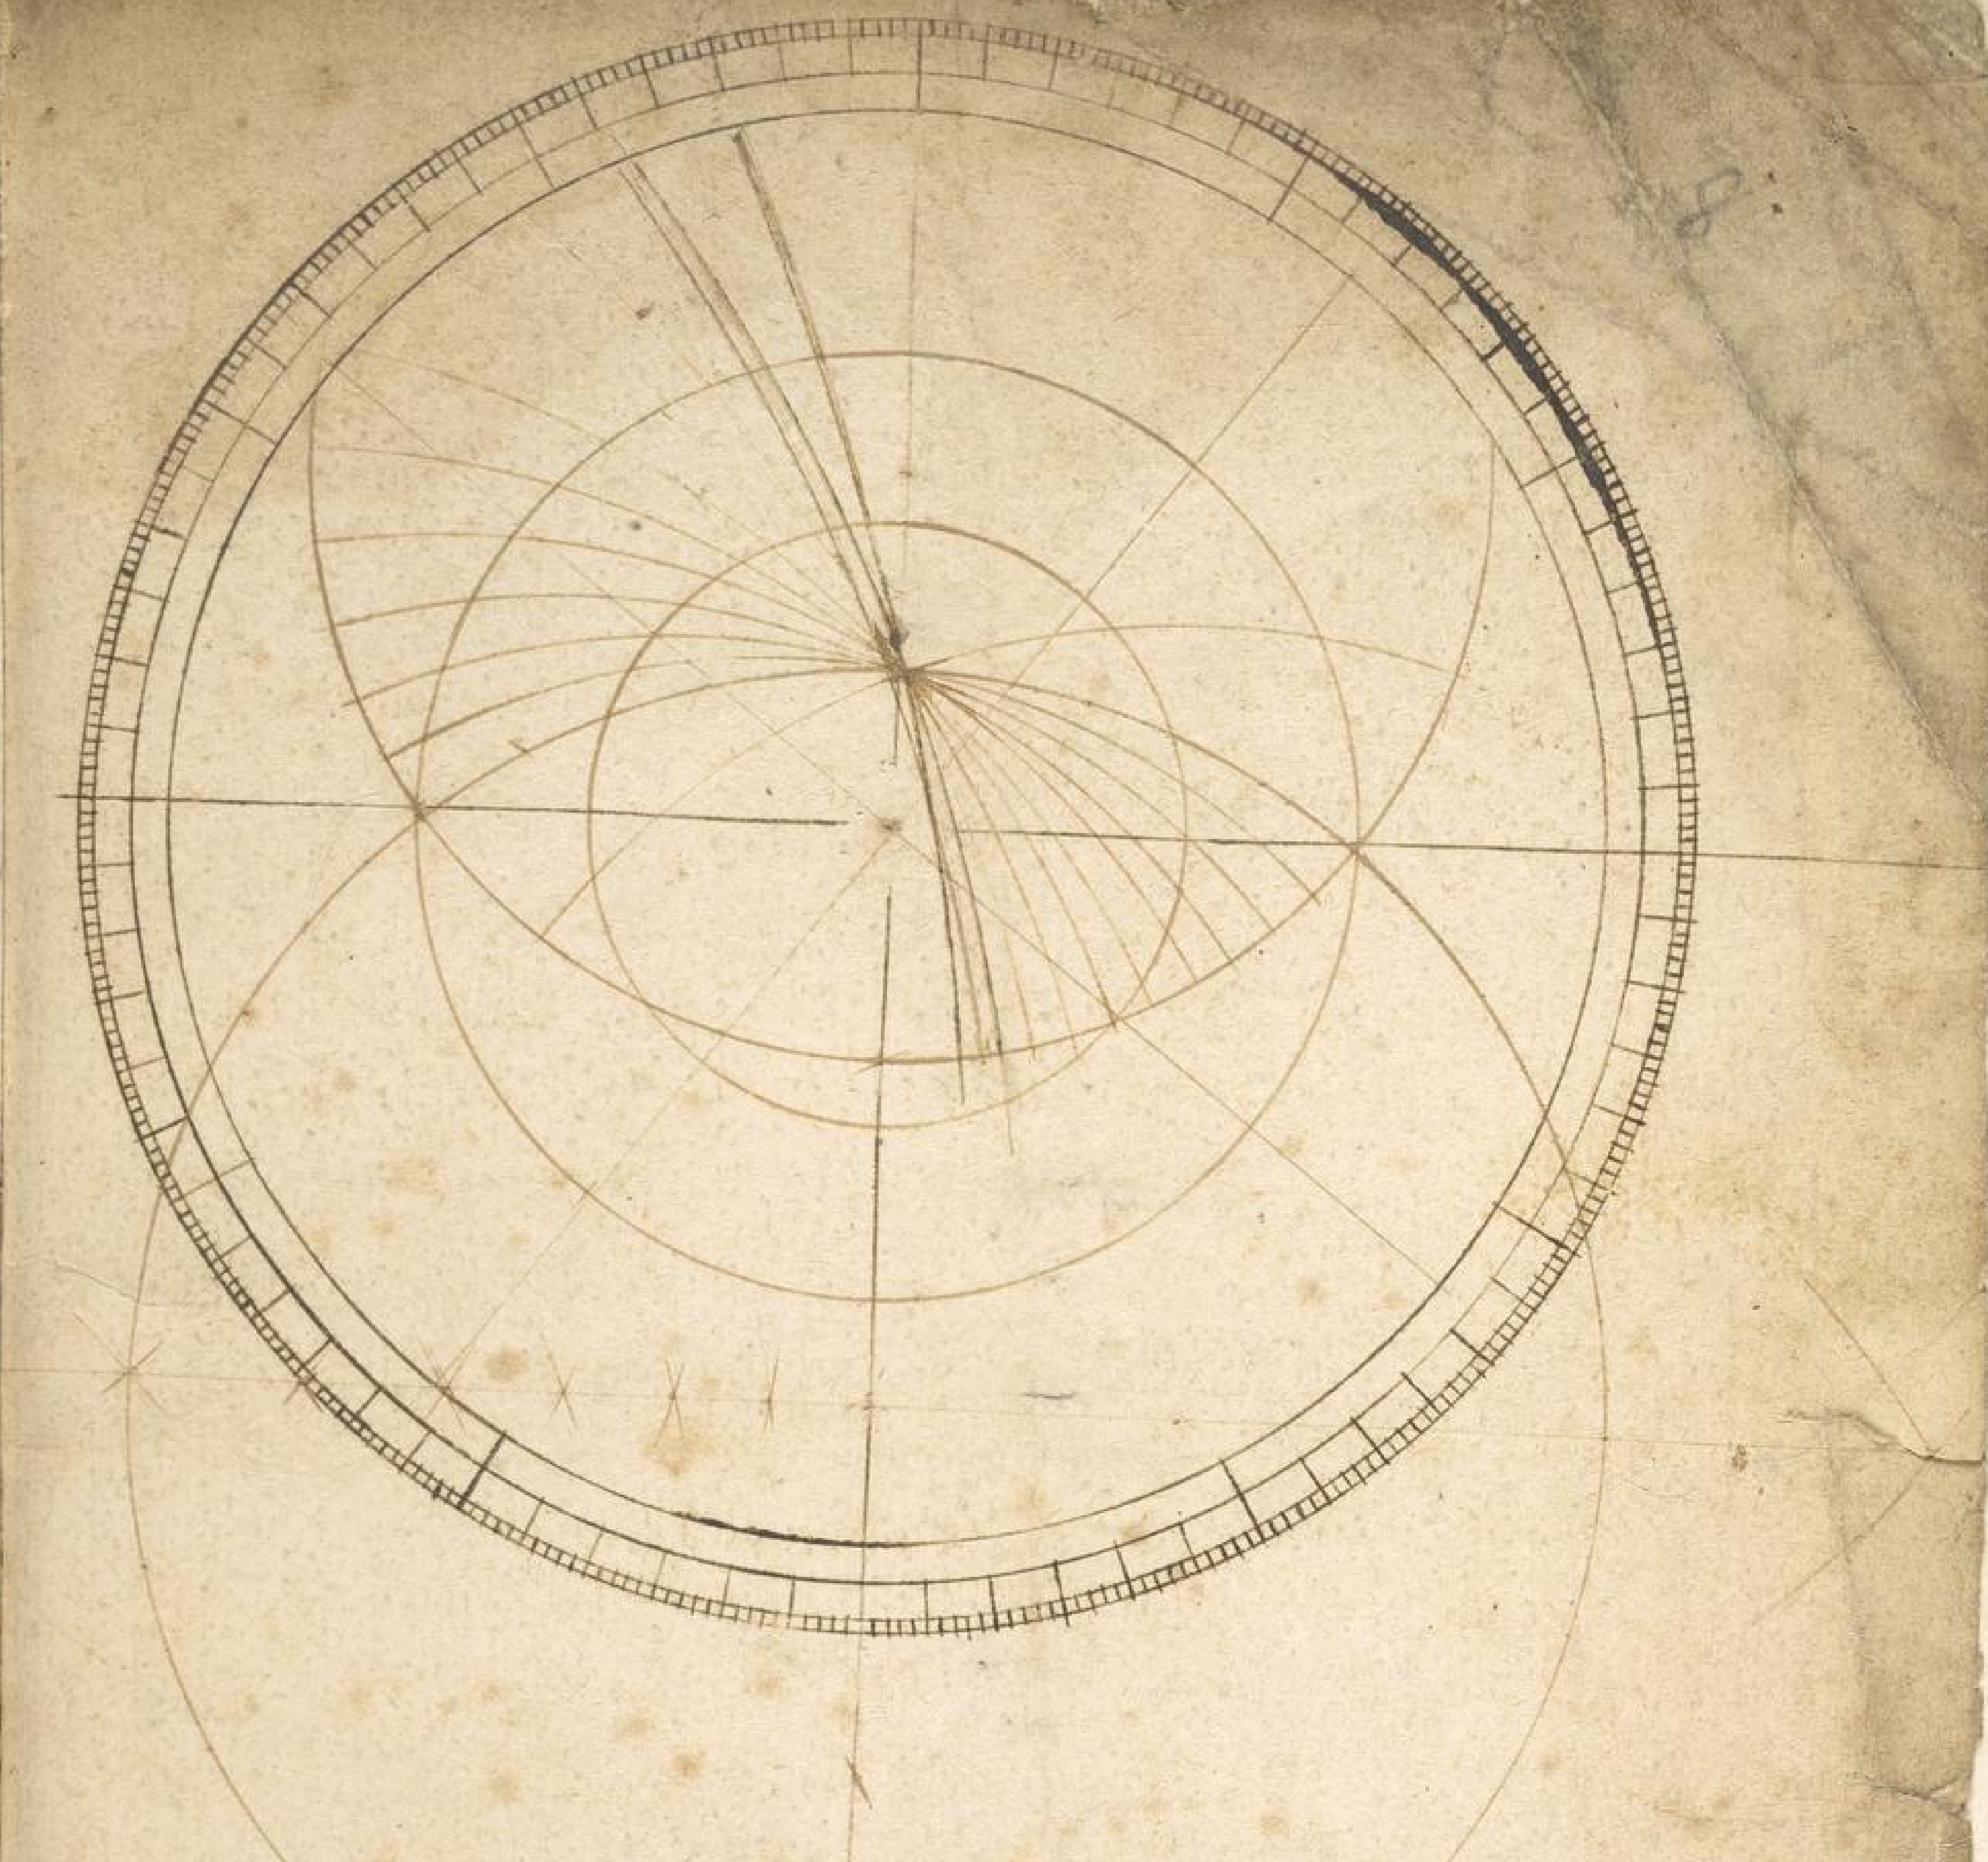

Quibus compositis accedendum est ad protraccionem circulorum horalium in quibus
diligenter observandum ut protrahantur secundum regulam .3. punctorum occulte quorum
extremorum et medii. Unum extremorum omnium horalium consistit in solsticio
estivali et tamen tres videlicet .11. 9. attingunt yemale. Ceteri vero
horales terminantur ad sinistrum latus .9. et mediantur in equinoctiali
ut .11. 10. 9. 8. 7. In protraccione quorum istorum horalium. primo protrahende sunt lon-
giores quorum quia .11. longissimus est videndum qualiter protrahatur. Set quia ut ha
predictum est in quolibet observanda sunt .3. puncta ut omnes terminantur in

parte inferiori ad solsticialem estiualem. Primo ponendum est super 49 gradus
et 28 minuta et respiciendum ubi iste solsticialis intersecatur ubi cadente punctus
et deinde ponendum est filum super 36 gradus et 21 minuta et uide ubi intersecatur
equinoxialem et fac ibi punctum. Deinde pone filum super 13 gradus et 28 minuta
et uide ubi intersecatur linea solsticii yemalis et fac ibi punctum quibus tribus
punctis ductis in unam circumferenciam resultabit hora undecima. Pro
decima hora circinanda pone filum super 43 gradus et 31 minuta in estiuali linea ho[ra] 10
in equinoxiali linea super 32 gradus et 30 minuta in yemali super 10 gradus et 10 minuta
quibus ductis in circumferencia resultabit hora decima. Pro nouena hora pone filum
super 24 gradus et 38 minuta in estiuali et fac punctum. In equinoxiali super 26 gradus ho[ra] 9
et 3 minuta in yemali super 4 gradus et 41 minuta ductis in circumferencia resulta
bit hora 9. Iam pro horali 8 constitue perpendiculum super 36 gradus et 21 minuta
et ubi secatur estiualis circulus subtiliter fac punctum. In equinoxiali super 18 gradus ho[ra] 8
et 1 minutum. Et quia iste circulus non protenditur in isto extremo ad yemalem aliter
operandum est quam in 3 precedentibus. Constituendum est perpendiculum super 18 gradus
et 2 minuta quantum estimari poterit et cadente respiciendum est ubi meridionalis
linea intersecatur ubi directe figenda est margarita. Deinde flectendum est
filum uersus sinistrum latus quousque steterit super 1 gradum et 1 minutum quantum potest
estimari et ibi figendus est punctus ubi margarita cadit et per predictos
3 punctos 8 hora est circinanda. Consimiliter operandum est in 1 horali ita quod ho[ra] 1
perpendiculum aptabitur in solsticiali estiuali ad 21 gradus et 21 minuta. In
equinoxiali ad 9 gradus et 10 minuta et aptanda est margarita in meridionali
ad 28 gradus et 1 minutum et in sinistra parte ad 1 gradum et 6 minuta et sic circinanda est
hora 1 per 3 punctos. Iam pro tribus aliis horis circinandis sciendum est quod non medi
ante per equinoxialem cum ad illum omnino sunt illarum quod maior est 6 6 horis ho[ra] 6
tinentur cetere ante non attingunt. Debet primo perpendiculum constitui
